## Get to know the 6Rs we apply to offer you a successful migration

### Rehost

Known as the simplest migration strategy, it consists of replicating an existing system in the cloud without any changes. It can be considered the easiest and fastest strategy to implement, but also the one that can be the most costly in the long run.

| EFFORT | BENEFIT |
|--------|---------|
| LOW | LOW |

### Replatform

This strategy involves using certain cloud-native services to replace modules or functionalities of the application you want to migrate, optimizing the operation and saving funds.

| EFFORT | BENEFIT | SAVINGS |
|--------|---------|---------|
| MEDIUM | MEDIUM | MEDIUM |

### Refactory

Also known as reachitecting, it consists of changing the architecture of the application to take advantage of all the benefits offered by the cloud. It may involve a lot of work, but it offers greater benefits in the long run.

| EFFORT | BENEFIT | SAVINGS |
|--------|---------|---------|
| HIGH | HIGH | MAXIMUM |

### Repurchase

This strategy involves replacing the application with a SaaS or pay-per-use scheme.
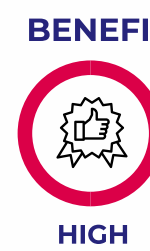

| EFFORT | BENEFIT | SAVINGS |
|--------|---------|---------|
| LOW | HIGH | MINIMUM |

### Retire

This strategy involves replacing the application with a SaaS or pay-per-use scheme.

| EFFORT | BENEFIT | SAVINGS |
|--------|---------|---------|
| MEDIUM | LOW | MAXIMUN |

### Retain

Although we would like it, not everything fits with the cloud, either by cost, compatibility or regulations, and it may even be that the best option is to keep your application in its original facilities.

| EFFORT | BENEFIT | SAVINGS |
|--------|---------|---------|
| LOW | LOW | MINIMUM |
